Juan Carlos Macías

QA Automation Engineer / SDET

Monterrey, Nuevo León, México · 81 3173 0474 · juanmacias4250@gmail.com · github.com/JuanMacias05 · linkedin.com/in/juan-macias-5ba3a124b

Professional Summary

QA Automation Engineer with 1.5+ years of software testing experience, manual and automated. Hands-on experience building end-to-end test automation, CI/CD quality gates and reporting from scratch for a multi-product insurance SaaS platform. I write production code as well as tests: Python (FastAPI) backends and TypeScript/React (Next.js) frontends. Comfortable on Kubernetes, AWS and GitHub Actions, and with using AI coding agents to speed up test creation and triage.

Experience

QA Analyst / QA Automation Engineer, Gencise.ai (US insurtech, remote)

May 2026 – Present

218 pull requests merged across 17 repositories · 200+ PRs reviewed · automated tests on 6 products

Test automation and framework

- Built and expanded E2E automation for 6 products (Bar & Tavern, Transportation, Property Insurance, Multi-Rater, Broker AI, Admin) with **Python, Playwright and Behave (BDD/Gherkin)**: smoke, regression, rating and premium-math correctness, filters, sorting, pagination and email checks.
- Contributed to the team's next-generation framework (**pytest + Playwright**): a YAML case registry with validation, production-safe smoke tests (preflight checks, network blocking, kill switch) and approved smoke/sanity cases for staging and production.
- Organized tests into 8 tagged suites, and added a known-failure (quarantine) status so the nightly run reports only real application bugs.

CI/CD and infrastructure

- Wired tests into **GitHub Actions**, running in **Kubernetes** pods (Helm): nightly runs, per-product regression runs, and production and demo smoke tests that start automatically after every deploy.
- Cut nightly run time from about 119 to about 76 minutes (**36% faster**) by splitting heavy suites across weekdays and running a full regression on Sundays.
- Made the pipeline more reliable: one automatic retry when the failure is infrastructure rather than the app, failing red on dead pods or zero-scenario runs, and publishing results even when a run is interrupted.

Reporting and test management

- Built the team's central test report from scratch with **Allure on AWS S3**, adding custom plugins: run history, per-product overview, a redacted production report, and per-test results with screenshots.
- Automated publishing of results to **Jira Xray** (60+ test cases with traceability) and **Slack** alerts that separate new failures from recurring ones, with links to the exact failed run.
- Built a UAT verification flow that checks a Jira ticket in Staging and attaches the evidence to it.

Full-stack development (bug fixes and features)

- Shipped features and fixes in the main product: **Next.js 16 / React / TypeScript / Tailwind** on the frontend and **Python / FastAPI / PostgreSQL (Alembic migrations)** on the backend.
- Built the Problem Reports module end to end: global search, filters, status and assignee fields, a reporter's own report page, and two-way **Jira** sync with a scheduled job.
- Built an analytics/adoption dashboard (API endpoint plus UI) restricted to admin users.
- Added retries and Slack alerts for failed document-processing (Vision) forwards, and fixed data issues in DOT-number extraction and file-type classification.
- Built a shared, reusable HTML email-layout library (Python package) and moved the emails of 6 services onto it.

QA Intern, MBQ Group

Jun 2025 – Apr 2026

- Ran manual functional and regression tests following internal QA procedures, and documented results and evidence.
- Reported and tracked defects with the development team, and kept the project documentation organized.

Operations Coordinator, Syl 13 Seguridad Privada

Jan 2025 – Jan 2026

- Coordinated staff coverage across assigned zones, plus payroll and operational logistics.
- Led recruiting and training for new staff.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash, Gherkin, HTML/CSS
- **Test automation:** Playwright, Behave (BDD), pytest, Allure, API testing (requests, Postman), visual evidence/screenshots
- **Test management:** Jira, Xray, test case design, smoke / sanity / regression / UAT strategy
- **CI/CD and cloud:** GitHub Actions, Docker, Kubernetes, Helm, AWS (S3), Terraform (basic)
- **Web development:** Next.js, React, Tailwind CSS, FastAPI, PostgreSQL, Alembic, React Query, Zod
- **Tools:** Git/GitHub (PR reviews), Slack integrations/webhooks, Ruff, uv, Storybook, Vitest, AI coding agents (Claude Code)
- **Methods:** Agile/Scrum, shift-left testing, code review, root-cause analysis of flaky tests
- **AI applied to QA and development:** Claude Code, Codex, AI-driven test case design, AI-assisted automation

Education

B.S. in Software Development Engineering, Universidad Ciudadana de Nuevo León (online), in progress, expected graduation 2027

Languages

- Spanish: native
- English: B1 (intermediate), used daily in written work with a US-based team
